Venetian Blinds

/ indoor blinds

Venetian blinds are one of the most versatile and practical window coverings offering control over light, ventilation and privacy.

Our Venetian blinds are made to measure offering a variety of colours and finishes to compliment any décor including aluminium in a range of colours and metallic finishes, the quality of real timber in painted or natural finishes, and a select range of complementary colours in mockwood for use in bathrooms and wet areas.

All blinds allow light to pass through the sides of the blind. In addition there will be small pin holes of light in each slat where the ladder cords pass through.

Larger Sizes

With larger size blinds (over 3m²) they will be heavy to lift up. Depending on the application, it may be advised to use two or more blinds instead of one. Be sure to lift these by holding the base rail to support the blind.

Colours

A wide range of colours are available to compliment any home - including whites, off-whites, neutrals and natural wood finishes.

Operation

All Venetian blinds are cord operated, making them simple and easy to use.

Sizes

The Mockwood and Timber Venetians have two slat sizes available: 50mm and 63mm. Whereas, the Aluminium Venetians have a 25mm slat size.

Mockwood PVC Venetians

Additional Information

Mockwood PVC is a great alternative to natural timbers, perfect for those wet areas while keeping a wood style.

Timber Venetians

Additional Information

Nyata-wood is a plantation timber specifically grown & developed for furniture & window coverings.

Extremely durable & stable hardwood timber for Venetian blinds, less likely to warp or dent than other timbers. Dense grain provides an excellent smooth surface for staining or painting.

Aluminium Venetians

Additional Information

Aluminium venetians are good in wet areas. When the blind is pulled all the way up there is minimal stack, allowing for maximum views. They are a light weight option, making it a great choice for your window.
